**Strategy**

The fund invests globally in liquid investment grade corporate bonds in hard currencies. The focus is on investment grade bonds from developed countries, although opportunities in the high yield segment (minimum rating BB-) or in emerging markets may also be taken to a limited extent. The maximum allocation to high yield bonds (non-investment grade) is 10% of the net asset value. The objective is to outperform the benchmark through active management over a market cycle on a currency-hedged basis (compared to the share class currency) net of fees.

**Key Factors**

- Actively managed global credit product with focus on liquid and high quality corporate bonds
- Targeted use of opportunities in Crossover range, with a maximum of 10% allocated to High Yield
- Experienced team, comprising 2 global corporates portfolio managers/ analysts with additional support from 10 experienced investment professionals
- Foreign currency investments are hedged against the fluctuations of the fund's reference currency

**Summary Risk Indicator (August 2025)**

The Summary Risk Indicator (SRI) assumes you keep the product for a minimum of 5 years.

Past performance is not an indicator of future performance and current or future trends. The performance values refer to the net asset value and are calculated without the commission and costs incurred on issue, redemption or swapping (e.g. transaction and custody costs of the investor). The fund does not include the security of capital which is characteristic of a deposit with a bank or building society. The indications are based on figures denominated in the fund currency. If this currency is different from the currency of the country in which the investor is resident, the return may increase or decrease as a result of currency fluctuations.

#### Sectors

### Glossary

**Duration:** a risk indicator that measures the sensitivity of the price of a bond issue or a portfolio of bond issues to a change in interest rates. **Ongoing charge:** the ongoing charge is a measure of the annual expenses incurred by a fund and is expressed as a percentage. It allows an accurate comparison of the costs of funds from different companies to be made. **Sharpe ratio:** the Sharpe ratio (risk-adjusted performance) is generated by calculating the difference between the average annualised return and the risk-free return. The resulting figure is divided by the annualised standard deviation of the returns. The higher the Sharpe ratio, the better the fund performance in relation to the risk potential of its portfolio. **Tracking error:** the tracking error measures the divergence between the return of a fund in relation to its benchmark. **Volatility:** a risk indicator demonstrating the fluctuation range (for example of the price or return of a security or fund unit) over a defined period; volatility is most often calculated using standard deviation. The higher the volatility, the greater the fluctuation range. **Yield to worst:** lowest possible yield that can be received on a bond that fully operates within the terms of its contract without defaulting.
